About BPV

BP Ventures helps financial institutions to cut costs, improve security, simplify procedures, and increase revenue by integrating blockchain technologies. In particular, we have extensive experience working with the Stellar ecosystem.

We specialize in

- Digital asset custodial software
- Securely managing in-house digital asset reserves
- Connecting and integrating institutions into the Stellar blockchain
- Helping companies issue and trade tokenized assets on decentralized networks

Anchor in a Box

winner of

Fund #10

bpventures.us

Anchor in a Box

BP Anchor in a Box allows asset issuers to seamlessly integrate a wallet into the Stellar ecosystem. Customers can send funds to any backend system with simplicity, speed and top industry-grade security.

Security & Compliance

- Complies with EU and US regulations
- Supports Basic or Full KYC including live video with the Passbase provider for less than \$2 per check

Stellar Ecosystem

- Connect Stellar to your payment rails with automated integrations, and support for all relevant Stellar SEP standards
- Supports Stellar SEP 10 Authentication for wallets and SEP 1 support

Flexible Fees

- Flexible fee charging on in and outbound transactions. Flat fee plus a percentage optimizes your earning potential
- Admin panel allows users to adjust rates and settings

End to End Delivery

- We help build unique product configurations, perform SFTP of CSVs, Webhooks and API integrations

Fast On-Boarding

- Customers can use any Stellar wallet via SEP 24 such as Solar, Lobstr, Beans, StellarX
- Direct function available for wallets not supported, where users can visit a website and follow the same procedure

Banking Integrations

- Secure and simple integration with core banking solutions
- Get started quickly with manual processing of bank wires with a bank interface and tracking of external bank references for reconciliation

Transaction Management

- Offers transaction cancellation and notes of transaction history
- Customers stay notified with emails of transaction receipts
- Admins are notified with emails for received payments

Admin Transaction Tools

- Provides SFTP of transaction data scheduling for sending transaction data to the backend system
- Export CSV files of transaction history and customer data
- Monitors and notifies backend errors through Sentry.io
- Callback system (hooks) contains all transaction information.
- Retry transactions on Stellar Blockchain
